

Dri-Applied™ Model 1200/1200A
Patent Pending

EZ Colorizer™

Product Information

eco's patent pending EZ Colorizer™ can turn your grinder into a coloring machine. The colorizer is portable, upstream mounted, and dispenses the newest popular dry pigments. Increase your revenue by selling the colored mulch that landscapers and consumers now demand!

The EZ Colorizer Dri-Applied™ Model 1200 and 1200A produce consistently colored mulch, in a wide variety of colors. The Dri-Applied™ will lower your coloring costs compared to water-based pigments. Finished product transportation costs will be lower as well, since there is no need to add unnecessary water weight to the mulch.

The Dri-Applied™ is easy to install and operate. Versatile mounting legs accommodate nearly all horizontal grinder infeed wall configurations. Simply connect the machine to the existing hydraulic system on the grinder and you're ready to run! Color delivery rate is infinitely adjustable using a needle valve to control the metering bar speed. Powder bridging above the metering bar is virtually eliminated by the rotating agitator bar. Compare these features with colorizers that either don't have anti-bridging features or have agitators that are mechanically complex and troublesome.

- Simple, Dry Color Application
 - * mounts on the in-feed of nearly any horizontal grinder
 - * uses economical Super Sacks®
- Lowers Your Coloring Costs
 - * dry colorant is less expensive than water-base colorant
 - * precise control of metering rate means less waste
- Lowers Your Transportation Cost
 - * no need to haul wet mulch

EZ Colorizer™ and Dri-Applied™ are Trademarks of eco/Technologies, LLC
Super Sack® is a Registered Trademark of B.A.G. Corp.
